

WHAT IS CLAIMED IS:

1. An information storage medium having  
information recording area, wherein

5 said information recording area includes  
management information recording area and at least one  
of object recording areas, and

said management information recording area is  
configured to store at least one type of entry point  
information.

10 2. The medium of claim 1, wherein said management  
information recording area is configured to store a  
first type of the entry point information which is used  
to describe at least one user-defined portion of the  
object recording areas.

15 3. The medium of claim 2, wherein said first type  
entry point information includes at least one  
information item of:

an entry point type for describing said first  
type;

20 a presentation time of one or more entry points;  
a primary text information; and  
a representative picture information.

25 4. The medium of claim 1, wherein said management  
information recording area is configured to store a  
second type of the entry point information which is  
used to describe at least one index point of the object  
recording areas.

5. The medium of claim 4, wherein said second type entry point information includes at least one information item of:

an entry point type for describing said second type;

a presentation time of one or more entry points;

an index number indicating said index point; and

a primary text information.

6. The medium of claim 1, wherein said management information recording area is configured to store a third type of the entry point information which is used to describe at least one index point of the object recording areas.

7. The medium of claim 6, wherein said third type entry point information includes at least one information item of:

an entry point type for describing said third type;

a presentation time of one or more entry points;

and

an index number indicating said index point.

8. The medium of claim 1, wherein said management information recording area is configured to store a fourth type of the entry point information which is used to describe at least one display list of the object recording areas.

9. The medium of claim 6, wherein said fourth

type entry point information includes at least one  
information item of:

an entry point type for describing said fourth  
type;

5 a presentation time of one or more entry points;  
and

a display list number indicating said display list.

10 10. The medium of claim 1, wherein said management  
information recording area is configured to store a  
fifth type of the entry point information which is used  
to describe at least one representative audio of the  
object recording areas.

15 11. The medium of claim 10, wherein said fifth  
type entry point information includes at least one  
information item of:

an entry point type for describing said fifth  
type;

a presentation time of one or more entry points;  
and

20 a representative audio duration describing a  
duration of said representative audio.

25 12. The medium of claim 1, wherein said management  
information recording area is configured to store one  
data unit entry information indicating an entry point  
of a unit of data recorded in one of the object  
recording areas.

13. The medium of claim 12, wherein said data unit

entry information includes size information describing a size of the data unit recorded in said one of the object recording areas.

14. The medium of claim 1, wherein said management  
5 information recording area is configured to store one still picture entry information indicating an entry point of a still picture data recorded in one of the object recording areas.

15. The medium of claim 14, wherein said still  
10 picture entry information includes size information describing a size of the still picture data recorded in said one of the object recording areas.

16. A method of recording audio information in an  
audio object recording area contained in the object  
15 recording areas of said information storage medium defined by claim 1.

17. A method of recording still picture  
information in a still picture object recording area  
contained in the object recording areas of said  
20 information storage medium defined by claim 1.

18. A method of partially erasing information  
recorded in the object recording areas of said  
information storage medium defined by claim 1.

19. A method of reading management information  
25 recorded in said information storage medium defined by claim 1.

20. A method of creating a play list representing

user-defined program chain information which designates a user-defined playback sequence of contents recorded in said information storage medium defined by claim 1.

21. A method of playing back audio information recorded in an audio object recording area contained in the object recording areas of said information storage medium defined by claim 1.

22. A method of reproducing still picture information recorded in a still picture object recording area contained in the object recording areas of said information storage medium defined by claim 1.

23. An apparatus used for the method of claim 16.

24. An apparatus used for the method of claim 17.

25. An apparatus used for the method of claim 18.

26. An apparatus used for the method of claim 19.

27. An apparatus used for the method of claim 20.

28. An apparatus used for the method of claim 21.

29. An apparatus used for the method of claim 22.
